Software Engineering at Arm

You might not think you know us, but you do. Our software is all over Silicon Valley. In fact, it's right in the palm of your hand. Because the biggest names in tech, from your smartphone brand to the makers of the world's fastest supercomputer look to us for the most powerful advanced core processors.

When you think about what software development can stretch to at Arm, from physical IP to machine learning, you'll wonder why you didn't apply sooner. The real-world applications for our technology are so massive, your work will influence the lives up to 70% of the global population, whether it's through award-winning VR gaming or life-enhancing medical equipment. Here you'll develop a better, connected future.

Revolutionary Rewards

development, mentoring, internal and external conferences, tech talks, and donut sessions. Whether you want to learn a new programming language, upskill your excel skills or read the latest articles on Microprocessor reporting we are with you to Spark the worlds potential.

Sabbatical

We'll always encourage you to take plenty of annual leave, so you stay fresh and inspired. But you know what really does it? When we encourage you to take an extended, paid 4 weeks' sabbatical after 4 years of service.

Progressive Leave

You're a human being, not a resource. And so it's important to us that we're there for you at significant points in your life. That's why we offer flexible progressive leave. Whether you're having kids, acting as a primary care giver or have lost a loved one, you'll be able to put your family first without worrying about your career.

Wellbeing

We create a safe space for you to look after your mental and physical health, with support ranging from medical insurance to the workplace mental health platform Unmind. Alongside a growing number of onsite gyms, yoga, cycling and running clubs. All of which comes with a flexible working policy to ensure you can live life and be your brilliant self.

Role Overview

Job Overview:

The Software team is responsible for developing and improving the software eco-system around Arm's next generation of applications processors.

As a member of the Software Group, you will have the opportunity to build your knowledge, and expertise on Open Source projects such as AOSP, Linux Kernel, etc. This contribution helps drive the development of world-class System Software for architected hardware and software platforms catering to different segments such as Mobile which become reference designs for futuristic devices in the market.

If you have an operating systems background, and have worked on Linux drivers or kernel, with some background on verification, then you are the right match for this job! We are looking for a highly motivated individual who seek for excellent customer experience with a desire to drive efficiency, standardization & continuous improvement for user experience across a wide range of platforms.

Responsibilities:

- Contribution to the design and development of reference systems and platform software for Arm application processors and MCUs.
- Helping to develop, optimize and deliver the software needed to support Arm's ground-breaking IP, as well as helping Arm grow its role in new embedded and enterprise market segments.
- We seek individuals with exposure and knowledge of every level of the System software stack ranging from BareMetal firmware, bootloaders, Kernel and Android.
- If you are similarly passionate about innovative technologies then we want to hear from you!
- Maintain a core set of infrastructure, address incidents in timely manner, identify root cause, fix and document problems and implement preventive measures.

Required Skills and Experience :

- 5+ Years of Experience.
- Strong C programming skills and Basic scripting knowledge Python or shell scripts.
- Strong understanding of system architecture (caches, buses, mmu, iommu, memory controllers, DMA, etc..)
- Strong operating system fundamentals with Linux kernel (Schedulers, Memory Management, and Process Synchronization)
- Development experience in working with Linux device drivers(USB, dma-engine, iommu/SMMU, v4l2, display), Kernel and Hypervisors(KVM/pKVM).
- Development experience in Linux/Android BSP development at product level.
- Good debugging skills using JTAG and other software methods.
- Show strong interpersonal that are vital for success!
- Build, deploy and maintain standard or custom Images, using AWS AMIs or using automated provisioning / configuration management of sophisticated multi-tier environments using tools such as Terraform, Ansible or Puppet.

“Nice To Have” Skills and Experience :

- Experience with working with an open-source community. We value familiarity with open-source project development cycles and contribution processes.
- Awareness about the value of CI and automated test system.
- Basic understanding of ARM- v8-A and ARM-M architectures.
- Deep understanding of digital design concepts and Verilog coding.
- Familiarity with hardware acceleration platforms like Emulators.
- Knowledge of sophisticated verification techniques like assertions, property checking etc.

In Return:

We will ensure that individuals with disabilities are provided reasonable accommodation to participate in the job application or interview process, to perform essential job functions, and to receive other benefits and privileges of employment. Please contact us to request accommodation.

Arm is an equal opportunity employer, committed to providing an environment of mutual respect where equal opportunities are available to all applicants and colleagues. We are a diverse organization of dedicated and innovative individuals, and don't discriminate on the basis of any

Accommodations at Arm

only be disclosed as necessary to provide the accommodation. Although this is not an exhaustive list, examples of support include breaks between interviews, having documents read aloud or office accessibility. Please email us about anything we can do to accommodate you during the recruitment process.

Hybrid Working at Arm

Arm’s hybrid approach to working is centred around flexibility, where we split our time between the office and other locations to get our work done. Within that framework, we empower groups and teams to determine their own particular hybrid working pattern, depending on the work and the team’s needs. Details of what this means for each role will be shared upon application. In some cases, the flexibility we can offer is limited by local legal, regulatory, tax, or other considerations, and where this is the case, we will collaborate with you to find the best solution. Please talk to us to find out more about what this could look like for you.

Equal Opportunities at Arm

Arm is an equal opportunity employer, committed to providing an environment of mutual respect where equal opportunities are available to all applicants and colleagues. We are a diverse organization of dedicated and innovative individuals, and don't discriminate on the basis of race, color, ...

Life at Arm

Life in the office doesn't get any better. Especially when those offices are as sleek as ours. And the people are as creative and intuitive. Combine that with our popular 'we, not I' mindset and you enjoy the kind of teamwork and togetherness rarely found elsewhere. We share so much in common, not least the same passion for progress, but we also welcome each other's diversity. Because, ultimately, we love to inspire and be inspired every day.

Everything Made Possible

Tech Takes on Climate Change: Made Possible by Arm

Apply for job

I'm loving my job as a Senior Software Engineer because I get to work with the cloud technologies like AWS and Kubernetes to try and make our engineers mor efficient and making continuous delivery systems.
