Software Engineering at Arm

You might not think you know us, but you do. Our software is all over Silicon Valley. In fact, it's right in the palm of your hand. Because the biggest names in tech, from your smartphone brand to the makers of the world's fastest supercomputer look to us for the most powerful advanced core processors.

When you think about what software development can stretch to at Arm, from physical IP to machine learning, you'll wonder why you didn't apply sooner. The real-world applications for our technology are so massive, your work will influence the lives up to 70% of the global population, whether it's through award-winning VR gaming or life-enhancing medical equipment. Here you'll develop a better, connected future.

Revolutionary Rewards

Candidate
[...] FEEDBACK

development, mentoring, internal and external conferences, tech talks, and donut sessions. Whether you want to learn a new programming language, upskill your excel skills or read the latest articles on Microprocessor reporting we are with you to Spark the worlds potential.

Sabbatical

We'll always encourage you to take plenty of annual leave, so you stay fresh and inspired. But you know what really does it? When we encourage you to take an extended, paid 4 weeks' sabbatical after 4 years of service.

Progressive Leave

You're a human being, not a resource. And so it's important to us that we're there for you at significant points in your life. That's why we offer flexible progressive leave. Whether you're having kids, acting as a primary care giver or have lost a loved one, you'll be able to put your family first without worrying about your career.

Wellbeing

We create a safe space for you to look after your mental and physical health, with support ranging from medical insurance to the workplace mental health platform Unmind. Alongside a growing number of onsite gyms, yoga, cycling and running clubs. All of which comes with a flexible working policy to ensure you can live life and be your brilliant self.

Role Overview

Job Overview:

Arm's Software Engineering group is responsible for creating and improving the software eco-system around Arm's next generation of applications processors. We help our partners build creative Arm-powered products, for various segments Mobile, Server, IoT connected devices, Augmented & Virtual Reality offerings, Autonomous Driving Solutions etc. and in this process, we work on range of development platforms: software-models, FPGAs, emulator, silicon. You will join a team of passionate Software Engineers who all want to mark their stamp on the future of ARM-powered computing, wherever it may lead.

As a member of the Software Engineering Group you will have the opportunity to build upon your existing background, knowledge and expertise and contribute to Open Source projects, e.g. EDK II, Linux Kernel, Trusted Firmware, SCP firmware etc. providing reference implementations and optimizations to key software system components. This contribution helps drive the development of world-class System Software, for architected hardware and software platforms catering Server Segment, and that becomes reference designs for futuristic ARM based servers. We seek individuals with exposure and knowledge of every level of the System software stack ranging from BareMetal firmware, bootloaders, Kernel and Distros. If you are similarly passionate about innovative technologies, then we are keen to hear from you!

Responsibilities:

- Contribution to the design and development of Reference systems and Platform software for Arm application processors and MCUs.
- Supporting key partners, upstreaming and maintaining open source software components
- Be part of an extended development team and you can expect to be working face to face with some of the greatest household names in our industry
- Helping to develop, optimize and deliver the software needed to support Arm's ground-breaking IP, as well as helping Arm grow its role in new embedded and enterprise market segments.
- Prepare test specification, test plans based on design documents of software and hardware modules.
- Develop unit test module/scripts for validating the software/hardware functionalities.

Required Skills and Experience :

- University degree (or equivalent), ideally in a numerate subject, although other graduates would be considered if they have appropriate experience.
- Experience in firmware and Linux kernel development, command over concepts such as, bootloaders, device drivers.
- Experience in developing complex software stack written preferably in C. Scripting knowledge on Python or Bash.
- Expertise in debugging and optimizing complex software systems.
- Familiarity with ARM-A or ARM-M architectures.
- knowledge of any SCM preferably Git
- Experience with customer interactions, diagnose and resolve reported issues.
- Show a strong interpersonal and communication skills that are essential for success; we are looking for excellent written and spoken English.
- We expect a professional, enthusiastic and flexible approach to work with a flair for creative lateral thinking and problem solving with a commitment to extend the breadth and depth of your knowledge.

“Nice To Have” Skills and Experience :

- Experience with working with open-source community. We value understanding of open-source project development cycles and contribution processes.
- Familiarity with open source projects such as TF-A and EDK II.
- Good understanding on ARM- v8-A and ARM- v8-M architectures, SMMU or IO-MMUs.
- Familiarity with technologies such as RAS, hypervisors, CXL, power management and security.
- Familiarity with industry standards such as ACPI and UEFI.
- Familiarity with open-source test tools.
- An awareness about the value of CI and automated test system.

In Return:

Arm is an equal opportunity employer, committed to providing an environment of mutual respect where equal opportunities are available to all applicants and colleagues. We are a diverse organization of dedicated and innovative individuals, and don't discriminate on the basis of any

Accommodations at Arm

Apply for job

only be disclosed as necessary to provide the accommodation. Although this is not an exhaustive list, examples of support include breaks between interviews, having documents read aloud or office accessibility. Please email us about anything we can do to accommodate you during the recruitment process.

Hybrid Working at Arm

Arm’s hybrid approach to working is centred around flexibility, where we split our time between the office and other locations to get our work done. Within that framework, we empower groups and teams to determine their own particular hybrid working pattern, depending on the work and the team’s needs. Details of what this means for each role will be shared upon application. In some cases, the flexibility we can offer is limited by local legal, regulatory, tax, or other considerations, and where this is the case, we will collaborate with you to find the best solution. Please talk to us to find out more about what this could look like for you.

Equal Opportunities at Arm

Arm is an equal opportunity employer, committed to providing an environment of mutual respect where equal opportunities are available to all applicants and colleagues. We are a diverse organization of dedicated and innovative individuals, and don’t discriminate on the basis of race, color, sex, age, national origin, disability, sexual orientation, gender identity, or any other characteristic protected by law. We are an equal opportunity employer. All qualified applicants are encouraged to apply.

Life at Arm

Life in the office doesn't get any better. Especially when those offices are as sleek as ours. And the people are as creative and intuitive. Combine that with our popular 'we, not I' mindset and you enjoy the kind of teamwork and togetherness rarely found elsewhere. We share so much in common, not least the same passion for progress, but we also welcome each other's diversity. Because, ultimately, we love to inspire and be inspired every day.
